Policy decision point

Cedar policies P0-P3
every tool call mediated
(complete mediation)

Evidence log → state

observations with source,
trust class, group, time
Belnap N/T/F/B per atom

Decision table

VEX status +
justification; B → conflict,
N → missing (abstain)

Validated synthesis

LLM note citing call ids
check → 1 repair →
deterministic fallback

VOI acquisition

EC² over hypotheses;
next tool by value
per unit cost

Verified extraction

span must be verbatim,
name the component,
parse as a version

Gated remediation

patch / restart only if
gating atoms are T with
 $\kappa^+ \geq k$ independent groups

Risk control

Learn-then-Test releases
hint-based decisions
at risk $\leq \alpha$
